Profile Summary

Aspiring penetration tester with practical experience in **network reconnaissance, vulnerability assessment, and web security testing**. Experienced with tools including **Nmap, Burp Suite, OWASP ZAP, and Metasploit** through hands-on projects and security labs.

Technical Skills

Network Security & Enumeration: Nmap, network service enumeration, port scanning, version detection, basic network vulnerability assessment.

Web Application Security: OWASP Top 10 testing, Burp Suite, OWASP ZAP, directory and endpoint discovery, authentication and session testing, JWT manipulation testing.

Vulnerability Assessment: Nessus, Nikto, vulnerability identification and analysis.

Exploitation & Offensive Security: Metasploit Framework, basic privilege escalation techniques, payload generation, exploit testing.

Reconnaissance & OSINT: Shodan, VirusTotal, information gathering techniques.

Certifications

- Certified Web Red Team Analyst (WEB-RTA) — Cyberwarfare Labs — 2026
 - Certified Network Security Practitioner (CNSP) — The SecOps Group — 2026
 - Penetration Tester Training — Sysap Technologies — 2025
-

Education

Bachelor of Commerce and Computer Applications (BCCA)

Dhanwate National College, Nagpur

Graduated: 2024

Projects

Network Vulnerability Scanner

Developed an automated vulnerability scanning tool that integrates Nmap service detection with vulnerability mapping using Exploit-DB references. Generates structured security reports to help identify vulnerable services.

PhishShield — Phishing Detection Tool

Built a Python-based security tool that analyzes suspicious URLs and domain indicators to detect potential phishing attempts and malicious domains.

Dynamic Sentinels — Security Monitoring Tool

Created a lightweight host monitoring script designed to detect suspicious system activity and potential security anomalies.
